SUMMARY

I am an aspiring Information Technology professional specializing in Cybersecurity with hands-on experience in secure application development, networking, and low-level programming. Developed a full-stack web-based Workflow Management System with integrated security mechanisms and projects in web, mobile, and low-level environments. Strong foundation in cryptography, ethical hacking, and secure system design.

EDUCATION

Mapúa Malayan Colleges Laguna – Cabuyao City, Laguna **Aug. 2022 – Jul. 2026**

Bachelor of Science in Information Technology, Major in Cybersecurity

- President's Lister, A.Y. 2022–2023, 2024–2025
- Dean's Lister, A.Y. 2022–2023, 2023–2024, 2024–2025
- Relevant Coursework: Applied Cryptography, Ethical Hacking, Virtualization and Cloud Security, Data Communications and Networking, CCNA Routing and Switching, Information Security and Assurance, Data Structures and Algorithms, Object-Oriented Programming, Web Development, HCI and UI/UX

WORK EXPERIENCE

OGIS Philippines, Inc. **Apr. 2026 – Jul. 2026**

Data Engineering Intern *Hybrid*

- Developed an ETL pipeline for a case study project as part of the company's internship program, leveraging Amazon Web Services (AWS) to support data extraction, transformation, and loading processes.
- Supported client projects by assisting with project documentation including taking notes during client meetings and User Acceptance Testing (UAT), while gaining hands-on experience with Microsoft Power Platform tools.

TECHNICAL SKILLS

- Programming: Python, C++, C#
- Web Development: HTML, CSS, JavaScript, ASP.NET, TypeScript, TailwindCSS, shadcn/ui
- Database: MySQL, MongoDB
- Tools & Technologies: Docker, Git, VS Code and Community, Figma, Adobe Apps, Microsoft Office
- Familiar With: Amazon Web Services, Microsoft Power Platform, Kali Linux, Oracle VirtualBox, Nmap, Metasploit, Wireshark

PROJECTS

Web-based Workflow Management System **Dec. 2025 – Mar. 2026**

- Developed a full-stack web-based Workflow Management System for the City Government of Biñan using MERN stack, enabling efficient management of document lifecycles and improving routing efficiency by 76% through the digitization of inter-office workflows and document tracking.
- Assisted in implementing security mechanisms such as AES-256, mTLS, and ECDSA algorithms, contributing to the protection of sensitive documents and strengthening the system's overall data security.

Campus Parking Slot Tracking Mobile App **Jul. 2025**

- Developed an Android mobile application using Kotlin in Android Studio to monitor parking slot availability across campus, enabling users to view parking status by area.
- Reduced reliance on manual tracking by providing real-time visibility of parking availability, helping minimize queue times and improve overall efficiency in locating available parking spaces.
